## TRACK RQUICK GUIDE

TRACK Rx is an easy way for healthcare providers to recommend outdoor activity to their patients. It includes fun activities for kids, incentives for 'filling' their prescriptions, and a network of family-friendly TRACK Trails to visit.

## With a patient...

- **Discuss** the benefits of outdoor activity for physical and mental wellbeing.
- **Prescribe** outdoor activity with your pad or through the EMR. Let the patient know that they can register their prescription by following the instructions on the back to earn a free prize.

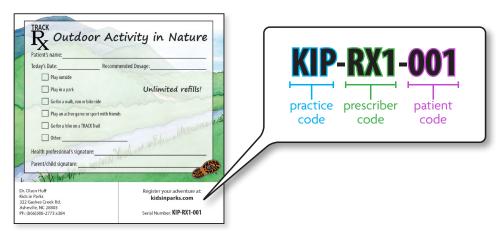

- **Give** the patient a TRACK Rx activity brochure and discuss places where they can complete the activities:
  - Backyard
  - Your favorite parks/greenways
  - Official TRACK Trails on kidsinparks.com

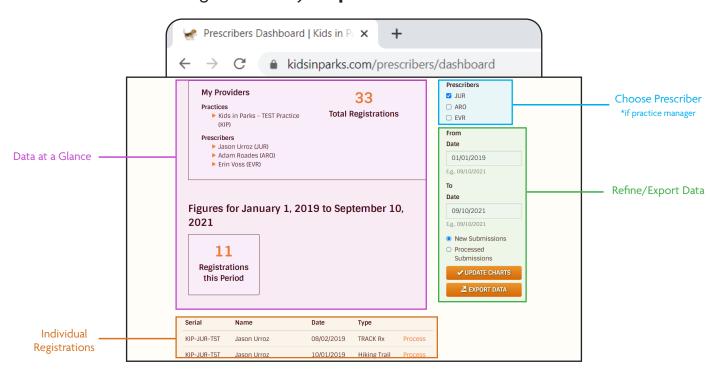

## TRACKing patient outcomes...

Each prescription has a **unique serial number** that links their registration with your practice.

When a patient registers with a serial number associated with your practice, you will be alerted by email and can review the registration in your **prescriber dashboard**.

Prescribers can note registration information in the patient's electronic medical record for **followup discussion** in future patient visits.
